Clinical experience suggests VIGIV is effective in the treatment of smallpox vaccine adverse reactions that are secondary to continued vaccinia virus replication after vaccination.

Medical Management of Adverse Reactions | Smallpox | CDC
Con "immunizzazione" si intende la resistenza dell'organismo, congenita o acquisita, all'azione di determinati germi patogeni o tossine. L'immunizzazione acquisita, rappresenta l'insieme delle risposte di tipo specifico (umorali e cellulo-mediate) attivate dal sistema immunitario verso i microrganismi patogeni e comprende la produzione di anticorpi specifici (chiamati anche "immunoglobuline").

HIGHLIGHTS OF PRESCRIBING INFORMATION
Vaccinia virus (VACV or VV) is a large, complex, enveloped virus belonging to the poxvirus family. It has a linear, double-stranded DNA genome approximately 190 kbp in length, which encodes approximately 250 genes.The dimensions of the virion are roughly 360 × 270 × 250 nm, with a mass of approximately 5-10 fg. Smallpox was the first disease to be widely prevented by vaccination, due to ...

Vaccinia - Wikipedia
Immunoglobuline E. Le immunoglobuline E (IgE) sono associate alle reazioni allergiche; il loro legame con i recettori dei mastociti provoca infatti la massiccia liberazione di mediatori dell'infiammazione, prima tra tutti l'istamina. Le immunoglobuline E sono estremamente importanti anche nella protezione contro le infestazioni parassitarie.
